Education

Veermata Jijabai Technological Institute (VJTI) — Mumbai, India
B.Tech Electronics Engineering, Minor - Data Science — *2023 – 2027*

Experience

Morgan Stanley — Mumbai, India
Summer Analyst (Technology) — *Jun 2026 – Jul 2026*

- Developed full-stack features for an internal debt pipeline analytics platform, enabling financial analysts to monitor and analyze deal data through interactive dashboards.
- Designed and implemented Spring Boot REST APIs integrating SQL Server and Elasticsearch to support server-side filtering, analytical aggregations, search, and paginated data retrieval.
- Built Angular dashboards using AG Grid Server-Side Row Model and Highcharts, implementing server-side pagination, sorting, filtering, and interactive analytics visualizations.
- Architected reusable service, repository, and Elasticsearch client abstractions following layered architecture principles, while collaborating through peer code reviews and Agile development practices.

Projects

CodeGen | *CrewAI, LangChain, Neo4j, FAISS, FastAPI* | GitHub — Oct 2024

- Built an agentic AI platform generating multiple competitive programming solution strategies using autonomous reasoning agents
- Integrated CrewAI orchestration pipelines with Neo4j knowledge graphs and FAISS semantic retrieval for contextual generation
- Curated structured datasets from Striver's DSA Sheet and editorial patterns for retrieval-augmented generation workflows
- Developed scalable FastAPI backend services with responsive frontend interfaces using HTML, CSS and JavaScript

PrepUp | *React, TypeScript, FastAPI, MongoDB, Groq* | GitHub | Live Demo — Jan 2026

- Built an AI-powered mock interview platform with authenticated user workflows and personalized role-based interview configurations
- Developed browser-based audio interview pipelines with recording, normalization, Groq Whisper transcription and LLM evaluation
- Implemented interactive interview-room experiences featuring waveform visualization, speech synthesis and real-time progress tracking

Grammarator | *Flan-T5, LoRA, Hugging Face, PyTorch* | GitHub — Aug 2024

- Developed an NLP-based grammar correction system using transformer models for contextual text correction.
- Fine-tuned *flan-t5-large* on the JFLEG dataset using LoRA for parameter-efficient training and improved grammatical correction.
- Built evaluation pipelines to validate generated outputs and measure correction quality across diverse sentence structures.

Technical Skills

Languages: Java, Python, C++, JavaScript, TypeScript, SQL
Frameworks: Spring Boot, React, Next.js, Angular, FastAPI, Express.js, Node.js
Databases: SQL Server, MongoDB, Neo4j, Elasticsearch
AI/ML: LangChain, CrewAI, Hugging Face, PyTorch, FAISS, LoRA, RAG
Tools: Git, GitHub, Maven, Gradle, VS Code

Positions of Responsibility

Department Head, Enthusia Sports Committee, VJTI — Aug 2024 – Mar 2025
